SUMMARY

Backend-focused Software Engineer with an M.S. in Computer Science and hands-on experience building RESTful APIs, distributed microservices, and cloud-native systems on AWS. Experienced across the development lifecycle — API design, database integration, deployment, and monitoring — in fintech environments handling payments and security-sensitive data. Built internal AI-assisted developer tooling to improve engineering workflows. Comfortable owning services end-to-end and collaborating across cross-functional teams.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Backend & APIs: Spring Boot, RESTful APIs, Microservices, Hexagonal Architecture, GraphQL, ADFS/SSO, Node.js/Express

Frontend: React, Angular, NgRx

Databases: PostgreSQL, Cassandra, CockroachDB, DynamoDB, MongoDB, Redis

Cloud & DevOps: AWS (EC2, ECS, Fargate, Lambda, S3, VPC, CloudWatch, Secrets Manager), Docker, Terraform/EAC, Git, CI/CD

AI Tooling: Claude AI (custom developer-productivity skills), GenAI-assisted development workflows

Testing & Quality: JUnit, Cucumber (BDD), Cypress, Contract Testing, Component/Integration/E2E Testing, SonarQube, Postman

PROFESSIONAL EXPERIENCE

Full Stack Developer — JPMorgan Chase, New York, NY *Dec 2025 – Present*

- Develop RESTful APIs in Java/Spring Boot for a payments microservice in the experience layer serving customer-facing payment flows; migrated it from a layered to a hexagonal (ports-and-adapters) architecture.
- Own automated testing for the payments service across unit, component, contract, integration, acceptance, and E2E tests, using contract tests to guard API compatibility with consuming and dependent services.
- Build and maintain Java/Spring Boot microservices for a multi-API financial data retrieval system integrated with a PostgreSQL database, resolving a query-performance bottleneck by restructuring SQL joins with materialized CTEs.
- Implemented a card-data decryption integration (ECDH + AES-256-GCM) using an internal encryption library, consumed by the virtual and physical card services; built a companion developer simulator tool now used by multiple internal teams for testing.
- Set up ADFS authentication for the payments service and the simulator frontend, restricting access to authorized internal users.
- Developed a GraphQL-based cross-reference mapping service (xref) backed by CockroachDB, consumed by 13 internal microservices.
- Deploy containerized services to AWS ECS in isolated VPCs via EAC (JPMC's Terraform wrapper), monitored in CloudWatch.
- Partner with downstream teams to define API contracts for service onboarding and maintain integration documentation.
- Built custom Claude AI skills to automate repetitive backend development and operational tasks, improving team throughput.

Full Stack Developer — Capital One, Richmond, VA *Aug 2024 – Sep 2025*

- Built and maintained 8 RESTful API endpoints in Java 17/Spring Boot for the Risk Pre-Check service, with additional contributions to the Assessment service, as part of a Risk Assessment Platform replacing legacy Salesforce-based workflows.
- Implemented backend logic to query and update PostgreSQL, DynamoDB, and Redis data stores supporting risk scoring.
- Integrated ML-generated risk scores from an internal Feature Store/ML Engine API into service logic.
- Added CloudWatch and Logback logging to owned endpoints to support production monitoring and faster incident triage.
- Built Angular/NgRx frontend components from Figma design specs for the platform's risk-assessment workflow UI.
- Wrote Cucumber (BDD) tests for backend APIs and Cypress tests for the Angular frontend.
- Collaborated in a 12-person cross-functional Agile team (product, risk, compliance, ML) through sprint ceremonies.

Research Assistant — Clemson University, Clemson, SC *Jan 2024 – May 2024*

- Built frontend-backend integration for a healthcare data analytics prototype, connecting a Python backend to a React frontend, processing and visualizing a dataset of roughly 30,000 patient records.
- Developed interactive Plotly visualizations supporting exploratory analysis of the dataset for university research use.

Software Developer — Tata Consultancy Services, Hyderabad, India *Feb 2020 – Jul 2022*

- Built Java/Spring Boot microservices and REST APIs using Spring's dependency injection, Spring Security, and data-access modules.
- Shipped Docker images to Amazon ECS (EC2 and Fargate) via Jenkins CI/CD pipelines; built event-driven AWS Lambda functions.
- Used DynamoDB with an ElastiCache caching layer and monitored production health with Splunk dashboards and alerts.

CERTIFICATIONS

AWS Solutions Architect – Associate | Azure Developer Associate | Azure AI Engineer Associate | Verify: Credly

EDUCATION

M.S., Computer Science — Clemson University, Clemson, SC — GPA 3.7/4.0
